

Cycling fun on three wheels

Delta tx

Delta tx – the chopper e-trike for everyday life and leisure from HP VELOTECHNIK. The dignified way to be mobile on three wheels.

Enjoy safety in comfort! The *Delta tx* combines e-mobility and design to create a unique riding experience

***Delta tx* – the easiest entry into the e-trike class**

The comfortable *Delta tx* makes safe cycling easier than ever before! It starts as soon as you get on: The high seating position and low-slung frame make it easy to get on and off, while the variable seat systems allow you to find your perfect position in no time. You'll enjoy an excellent overview of traffic, a secure position when stopping at traffic lights, and a panoramic view on a country ride.

The controls on the ergonomic handlebars are always easy to reach, making steering, shifting gears, and braking a breeze. Wonder what the best part is? You'll receive support in every situation! All *Delta tx* trikes from HP VELOTECHNIK come equipped with an electric motor up to 25 km/h (16 mph) or up to 20 mph for the USA, including a push assist up to 6 km/h (4 mph). Four motor systems with different power profiles are available, and you can choose a fully automatic gear-shift for each of the motors. Simply pedal in your own pace, your trike will select the right gear for you!

The comfortably suspended frame is crucial for the stable riding characteristics. The suspension element underneath the seat can be individually adjusted to your weight and a total load of up to 145 kg (320 lbs). The voluminous *Super Moto-X* tires developed by SCHWALBE especially for e-bikes roll extremely smoothly. With their 62 mm (2.44") width the tires also offer plenty of grip, even on poor roads.

The *Delta tx* offers a superior riding experience with high tipping stability. The seat is positioned between the rear wheels to optimize the center of gravity, while the low position of the motor and battery, as well as the generously dimensioned and deeply positioned luggage basket, ensure a safe and stable ride.

Top class: The *Delta tx* is lightweight in every aspect. With its sturdy aluminum frame, the lightest version weighs just 35 kilograms (78 lbs) including motor and battery. Your lightweight *Delta tx* excels in the premium league of motorized tri-cycles!

Transporting your trike is easy: The *Delta tx* is separable for transportation, allowing you to disassemble it into three space-saving parts in three minutes. You can easily lift them into your car and still have enough space for your luggage. For maximum mobility, you only need a minimum of tools – a 5 mm Allen key!

We offer the *Delta tx* in two versions. With the *Special Edition* models (SE models), you don't have to spend time evaluating the many possibilities of our modular system. You will receive your trike almost fully equipped with a versatile set of components, based on our many years of experience as a custom bike manufacturer. If you opt for a *Delta tx* in the modular system, you can choose your favorite options and have your E-Chopper built exactly according to your wishes. Your HP VELOTECHNIK dealer will be happy to advise you!

Take hold of the *Delta tx*! The ingenious design ensures smooth directional stability and maximum flexibility. With a turning circle of just 3.20 meters (10'5"), you'll be able to navigate even the tightest spaces with ease.

Not an inch too high: The *Delta tx* achieves a comfortable step-through height of just 35 cm (12.6") by elegantly positioning the cables and the smooth-running chain guard low against the frame. No shoe will get stuck.

Not an inch too wide: At 75 cm (29.5"), the *Delta tx* is conveniently narrow. This means that you can also ride on narrow paths without any problems. And if you want to take your trike through your gate and door to park it, you can easily roll inside.

With the *ErgoMesh Premium* seat, the angles of the seat base and backrest can be adjusted separately thanks to the *Seat-O-Flex* hinge (see picture above and top right).

Even in the basic version with the *ErgoMesh* seat, you can choose between two sizes and two heights.

Fitting while sitting

With *OrthoFlex*®, you can fine-tune the seat perfectly to your body shape. The technology consists of four highly breathable padding blocks made of open-pored polyurethane material. You simply insert these 3D cushions into the side pockets of the seat, adjust them to your comfort requirements and close the pockets with Velcro. If the alignment is not yet as desired, the easiest way to re-adjust the cushions is while seated: Sit back in the *ErgoMesh* or *ErgoMesh Premium* seat, open the pockets and optimize the position of the cushions for best support. For a particularly snug fit, you can also cut the cushions to size. With *OrthoFlex*® technology, you can enjoy a comfortable seating experience like never before.

Seat with customized shape

In addition to positioning the *OrthoFlex*® upholstery, you can also adjust the straps on the back of your seat to adapt the mesh seats to your individual body shape. The backrest of the *ErgoMesh* is fitted with five straps, the *ErgoMesh Premium* has six straps. They can be adjusted tighter or looser in seconds using a ladder buckle. Two additional straps are located under the seat. You can use the strap system to tighten the mesh cover of the seat either selectively or over a large area. HP VELO-TECHNIK uses the extremely resistant Hypalon® material, which is otherwise often used in boat building, to ensure optimum power transmission at the transition from the strap system to the seat cover.

Your seat, your throne

At **HP VELOTECHNIK**, we believe that the key to a comfortable ride is a really comfortable seat. That's why we have developed the *Delta tx* with the utmost attention to seating comfort. Our *ErgoMesh* and *ErgoMesh Premium* seats are designed to provide maximum ventilation and adjustability. You can choose between two heights: the standard or the *HS* version, which is 11 cm (4.3") higher and provides a better overview. Depending on your height and therefore the position of the seat on the frame, you can sit at a height of 59 to 71 cm (23" to 28").

The *ErgoMesh* and *ErgoMesh Premium* seats are also available in two sizes: standard and XL. The XL seats are each 5 cm (2") wider. Their backrests are also slightly higher and the seats bases slightly lower than the standard seats. You can adjust the shape of the seat to your body by tightening or loosening the tensioning straps on the back of the seat.

Our *OrthoFlex*® technology ensures that even the standard *ErgoMesh* mesh seat offers plenty of scope for further ergonomic adjustments. It consists of four highly breathable cushions that can be individually cut to size. You insert these 3D cushions into the sides of the seat and backrest and adjust them according to your preferences.

For the ultimate in comfort, our *ErgoMesh Premium* seat offers independent adjustment of the inclination of the backrest and seat base within a range of 25°. With the optional *Seat angle adapter*, you can raise the backrest up to a further 9° steeper.

Delta tx seat heights

Good traction: With the Freewheelin' Twin drive technology used by HP VELOTECHNIK for the Delta tx, both rear wheels are driven when riding straight ahead. When cornering, you have powerful propulsion without a complicated differential gear, even on ice and snow.

Want to ride fully loaded? We've got you covered!

Secret competition for cargo bikes: Transform your Delta tx into a versatile transporter! With our various luggage systems, you can carry a total up to 50 kg (110 lbs) of cargo easily, safely and with optimum suspension on your trike.

Are you looking for a trike that can carry all your luggage with ease? Look no further than the Delta tx! It is designed to accommodate as much luggage as possible with the lowest possible center of gravity. Regarding this aspect, the space between the rear wheels is the logical choice for accommodating a practical transport basket. Due to the elegant design of the Delta tx, this space is so generous that HP VELOTECHNIK has developed an extra-large basket for you! You can easily remove the 25 cm (9.8") high container by the handle and turn it into your shopping companion.

You can also use the Delta tx without the basket and load a large crate of beverages, for example. The platform carrier is securely attached to the suspended part of the frame and has a comfortable loading height of 38 cm (15"). The internal dimensions are 48 x 32.5 cm (18.9" x 12.8") and the maximum load is 25 kg (55 lbs).

Above the platform carrier with the large basket, there is still plenty of space for a standard bike bag. Simply hang it in the optional Bag mount behind the seat to carry up to 12 kg (26.5 lbs) of extra cargo. Additionally the Add-on bags designed by HP VELOTECHNIK can be attached to the right and left of the seat. The practical bags, each with 1.4 liters of storage space (1.5 kg or 3.3 lbs), are easy to clip on and off – your highly variable companion on a day trip.

Small luggage, right at hand: Our Side bag mounts are the perfect option for attaching standard handlebar bags to the right, left or both sides of the seat. The load capacity of each is 5 kg (11 lbs). And if you want to keep things really cool, you can also fit the practical holders with a standard bicycle cup holder.

In addition to the platform carrier, you can opt for the Trailer coupling option. This allows you to pull a child or cargo trailer behind you with a total weight of up to 40 kg (88.2 lbs).

The optional Add-on bags behind the seat are ideal for your small luggage. The left pocket has an airy mesh fabric on the side, ideal for stashing the optional protective cover. That allows the contents to dry while you continue your journey.

Perfect for touring and traveling: With the optional Bag mount, you can carry a standard bike bag safely behind the seat.

With the Side bag mount, you can mount handlebar bags on each side of the seat. They are always within easy reach, even while you are riding your trike.

One frame size for the whole family

The main frame of the **Delta tx** comes always in one size. It offers space for people between 1.59 (5'2") and 2.00 meters (6'7") tall. For stepless adjustment, simply open the two quick-release levers to slide the seat on the frame.

The **handlebar system** is also adjustable in length and height. The elegantly curved standard stem conveys a real chopper feeling, while the shorter, straighter version makes the steering feel more dynamic and responsive. The short stem is also recommended for people under approx. 1.70 m (5'6") tall. This means that the **Delta tx** also offers plenty of scope to adjust it to your individual preferences for arm and hand positions.

The **Delta tx** can be split into three parts in around three minutes. The only tool you need is a 5 mm Allen key. The front section has a packing size of 119 x 60 x 42 cm (46.8" x 23.6" x 16.5"; L x H x V, with pedals), the rear section measures 122 x 75 x 60 cm (48" x 29.5" x 23.6"; with handlebars and platform carrier). The seat can be easily stowed next to it for transportation in your car. The weight of the two frame parts is approximately the same, namely around 16 kg (36 lbs) each. This is a great advantage after splitting the trike when lifting the individual parts!

Check out our video on our homepage www.hpvelotechnik.com to find out how to split the trike. You will also learn how to easily attach the handlebars under the platform carrier and disconnect the motor cable connector.

Technical Data

Seat height	48-71 cm (19-28")	Bottom bracket height ...	43 cm (17")	Turning circle	3,20 m (10'5", outer wheel)

	11° (seat base)	Height (max.)	128 cm (50.4", seat upright)		

Let's go! Our basic model from BAFANG provides you with full power from the very first pedal stroke.

Lots of torque and full acceleration: The top model, the SHIMANO STEPS EP801 Cargo, ensures maximum riding pleasure.

Undercover, but no secret: The cover at the rear protects the rotating parts of the intermediate gear.

Always with motor! And a fully automatic gearshift on request

You can choose from four different electric motors for your *Delta tx*. All of them are bottom bracket motors that provide additional assistance up to 25 km/h (16 mph), or up to 20 mph in the USA. The basic version comes with the *M300* from BAFANG. Regardless of how forcefully you pedal, it unleashes its power as soon as you start pedaling. You don't even need a throttle for this. The rotation-controlled system offers five power levels and helps you to ride home relaxed even when you start feeling tired.

If you appreciate a more sporty feeling, choose one of the three torque-controlled SHIMANO STEPS motors: the more powerfully you pedal, the more assistance the system provides. The *E5000* system is ideal if you are looking for a motor with a medium level of assistance at an attractive price. The *E6100* provides 50 percent more torque power. The high-end *EP801 Cargo* system provides 85 Nm and 600 W maximum power for rapid acceleration from the very first pedal stroke.

Many cyclists love to shift gears extensively in order to always pedal in the optimum range. With our automatic gearshifts adapted

to the motor profiles, you always ride in the optimum range – without having to lift a finger. While you are waiting at a red light, for example, your system has already shifted into the right gear.

The ENVIOLo Trekking Automatiq hub is an ideal addition to the BAFANG motor. It not only changes the gear ratio automatically, but even without steps!

The Nexus Di2 8-speed hub is a great partner for the *E5000* and *E6100* motors. With the top model, the powerful *EP801 Cargo*, you have the choice between the continuously variable ENVIOLo or the *Cues Di2* from SHIMANO. The *Cues* is fascinating as the world's first electric automatic derailleur. Even when you are not pedaling, the chain continues to rotate as required and, thanks to the *Autoshift* function, ends up in the gear that suits your speed.

Of course, we also have something in our range for fans of traditional manual gearing: the classic encapsulated hub gear, the ROHLOFF *Speedhub*. The very low-maintenance 14-speed drivetrain, which is often chosen by experienced riders for challenging conditions, can be easily operated using the twist grip.

* Range measured by HPVELOTECHNIK under similar conditions as for the SHIMANO STEPS motors.

** Range as stated by SHIMANO: support mode Eco, flat terrain, 23 km/h (14.3 mph), system weight 105 kg (231 lbs), temperature 23°, standard battery with 418 Wh.

Delta tx – as versatile as you wish

Optional features for true individuals: Do you have your own notion of your ideal trike technology? Our modular system enables us to build your trike to meet your needs and desires. A whole range of reliable features and components is available for your *Delta tx*, all of which have been specially developed to excel in everyday use.

On this page we present selected accessories. All other options can be found on the following price pages. Or take a look at the online configurator and get an additional visual impression. You can contact your HP VELOTECHNIK dealer for detailed advice. He knows the advantages of the various components, can tell you the maintenance intervals, and will gladly help you tailor your *Delta tx*'s features to match its intended use, your riding style, and your needs.

The *Headrest* for the *ErgoMesh* and *ErgoMesh Premium* seats can be adjusted in height and inclination in seconds thanks to its quick-release design. The mesh upholstery is washable.

With the extra-large viewing window of the *Rear mirror B&M Cyclestar E*, you can see what's going on behind you. The field of view is easily adjustable, but remains in position even on poor roads.

Walking aid mount: Easy insertion, safe transport and fast removal of walking aids. The practical fastener adjusts seamlessly to diameters from 20 to 31 mm (0.78" to 1.18"). HP VELOTECHNIK's stainless steel clip fixates the walking aid and releases it again with a non-fumbling one hand operation.

The *Anti-tip wheels* increase safety in extreme riding situations, for example on inclines or when starting off with a lot of power. Recommended for: tall riders, with a high seat, with a *Bag holder*, with a high luggage load; always with the extra powerful drive option *SHIMANO STEPS EP801 Cargo*.

Immobiliser: Push out the handle, pull out the key – and the powerful *Frame lock AXA Imenso* effectively locks the front wheel. The AXA accessory *Chain for frame lock* (1 m / 39" long) is recommended as an extra to securely lock the trike to a bicycle parking device.

Pedal with heel strap: The alternative for those who do not want or may not be able to use clipless pedal systems. Easy entry with any kind of shoe through the automatically self-righting positioning. Further special pedals, for example with lower leg fixation, can be found on the next page.

The choice is yours!

Choose according to your heart's delight – please find all options, accessories and prices on the previous pages!

Detailed product information can be found, in addition to this catalog, on our web pages with a variety of test reports from bike magazines, in our online recumbent configurator and in the practice-oriented operating and maintenance manual.

Personal customer service in your area can be obtained through our large network of retail partners. You will be advised on an individual basis and obtain valuable information on our sophisticated modular system of accessories and professional workshop services.

10 years warranty is offered by HP VELOTECHNIK for the frame of your new trike. We stand by our products and would like to assure you of sustainable, carefree riding pleasure. Details can be found in the service section of our website.

Excellent quality and service: HP VELOTECHNIK was awarded for five times as the best cycle manufacturer in Germany by the industry association VSF. For us, this is a source of confirmation and motivation. With our dedicated team at HP VELOTECHNIK, we are ready to create your personal dream trike!

Fast, convenient and informative: Selecting the components of your trike is easy with the configurator at www.hpvelotechnik.com. The online configurator provides detailed pictures, technical tips in english language and checks the interplay of your chosen equipment. With your personal configuration number, you can edit your saved component choice, print and call your dealer for advice.

Your custom Delta tx is individually built to order in our recumbent factory in Kriftel, Germany. You can choose the components according to your needs. By going through a personal consultation at a specialty shop in your area, extensive test rides, useful accessories and expert customer service, you will get a trike that fits you perfectly.

Your dealer is looking forward to your visit:
