Delta tx Shows Just How Relaxing Cycling Can Be

HP VELOTECHNIK debuts Delta tx e-trike with new Under Seat Steering at CABDA West / Innovative system enhances comfort, panoramic visibility, and accessibility for riders

LAS VEGAS, NV — MARCH 18, 2026 — German recumbent specialist HP VELOTECHNIK is unveiling a world-first innovation for its Delta tx e-trike at the CABDA West bicycle trade show: The new Under Seat Steering (USS) designed to provide an even more relaxed and ergonomic riding experience. The new steering system will be presented publicly for the first time at CABDA West on March 18–19 in Las Vegas.

Recumbent trikes are known for comfort and stability, but HP VELOTECHNIK's latest design takes the concept further. Unlike traditional Above Seat Steering, the new system positions the handlebars alongside the rider's body, allowing arms to remain relaxed while the hands naturally grip the handlebar ends. This position enables effortless control of steering, shifting, brakes, and motor functions. "The new Under-Seat Steering allows riders to relax their arms completely while enjoying an unobstructed panoramic view," said Daniel Pulvermüller, CEO of HP VELOTECHNIK.

Innovative Integrated Adjustment System

To ensure the trike fits riders of different heights, HP VELOTECHNIK developed a new integrated design combining the seat mount and Under Seat Steering assembly into a single component. When the seat is moved forward or backward along the Delta tx's sliding rail to accommodate different riders, the steering position automatically moves with it. A specially designed quick-release clamp allows riders to easily adjust the position while maintaining the ideal ergonomic distance between seat and handlebars. The USS allows independent adjustment of handlebar width, tilt angle, and ergonomic positioning. Large quick-release levers allow riders with limited mobility to fold the right handlebar section away, making it easier to enter or exit the seat.

Availability and Pricing

The Delta tx with Under Seat Steering will be available starting May 2026 through authorized dealers in the USA and abroad. The e-trike will be offered in Blue Flash or Sparkling Iron Gray. Suggested retail price: \$8,789 (USD).
