Delta tx® Wins Eurobike Award

Major achievement for HP VELOTECHNIK: Its Delta tx® comfort trike with an innovative Above Seat Steering won the Eurobike Award, one of the cycling industry's most coveted design honors

FRANKFURT AM MAIN. The Delta tx® comfort trike was honored with a Eurobike Award at the Eurobike trade show in Frankfurt in late June. Featuring an innovative Above Seat Steering system with universal joint, it earned one of the cycling industry's most prestigious design honors in the E-Bikes category. The stable three-wheeler prevailed against leading competitors from the traditional two-wheel bicycle market. The award marks the ninth Eurobike Award for the recumbent bike manufacturer HP VELOTECHNIK, based in Kriftel, Germany.

With the extensively redesigned Delta tx®, HP VELOTECHNIK has significantly enhanced the trike's everyday usability, particularly for older adults and people with limited mobility. A standout feature is the new Above Seat Steering with a universal joint. It enables precise steering with minimal arm movement while allowing the handlebar to fold away easily for convenient entry and exit. The handlebar's length, height, and angle can also be adjusted with ease.

The six-member Eurobike Award jury, made up of leading industry experts and journalists, highlighted these innovations in its statement: "The Delta tx® enables people with

physical limitations to enjoy cycling – and makes it remarkably easy. In an aging society with steadily growing individual mobility needs, bicycles like the Delta tx® help preserve access to social participation and independent mobility." The jury also praised the trike's stable handling and, in particular, its steering system with universal joint, "which combines easy access with familiar, ergonomically positioned controls."

Also new for the Delta tx® is the BAFANG M410 HD mid-drive motor. Equipped with Smart Pedaling software developed exclusively for HP VELOTECHNIK, the system also supports riders with very limited leg strength. A thumb lever allows them to switch easily from torque-based to cadence-based assistance (in USA: Class 2 e-bike with throttle up to 20 mph).

The Delta tx® with universal joint will be available through authorized dealers starting in August 2026, with prices beginning at €7,139 (\$9,019). Models equipped with the BAFANG motor will start at €7,638 (\$9,709).
